EXPERIMENTS, OBSERVATIONS AND NOTES OF PRACTICAL INTEREST.

Botanists as the Sarcodes Sanguinea-It Is Somewhat Like a Rosy and Snow Tinted Hyacinth.

One thing that never fails to interest all who see it, when alone it is found on the mountain heights of the Sierras, is the snow plant, known to botanists as the Sarcodes

finagine a rosy and snow tinted crowded hyacinth, from 8 to 20 inches in beight, every minlature bell wound about by a rosy and frosted silver ribbon, all topped by a huge head of asparagus in hoar frost and silver. The frosted papilla is very marked on every sepal and bract. Though the whole translucent spike is flushed with rose and car-mine, the petals are the deepest and most brilliantly colored parts of the flower, which is ave parted, and

each open one show-ing slightly the stamens and pistils. There have been sen specimens bearing eighty per-fect flowers and a pseudo bulb 22

SNOW PLANT. ference, brittle almost as spun glass, and althem to cultivation there is a fortune in store, and what a glorious addition they will be to our early garden flora, says American Garden, in which the above illustrated description originally appeared. They have been gathered in their native wilds from May until past the middle of July, but even at home are said to be capricious in growth.
Localities where they abound one season may
be without them the next. They are found
as high as \$,000 feet above the sea level and

Hanging Doors and Blinds. In hanging a number of doors which are of the same size, the time expended upon measuring the correct position of the hinges may be, according to Building News, saved in a very simple manner. Take a lath and mark upon the top and bottom the exact position where the hinges should come, drive in at these marks sharp pointed brads, and you have a gauge which may be used in hanging all doors of the same size. In using it, all that is necessary is to place it against the the level with the top of mark the exact position of the hinges. The same gauge lath may be used in marking out the position of the hinges of the stile of the door frame, excepting that a nail should be driven in the bottom of it, so that there may be sufficient room left at the bottom to allow proper play of the door. The use of a gauge lath in the case referred to is an example of its see. It is of equal utility in tanging many other pieces, such, for instance, as inside and outside blinds, shut-

One Way to Make Ground G.ass, A writer on this subject says: I desired to

have several pieces of ground glass, to use for some purpose. I first bought five cents' worth of emery and two plates of glass of the size required. Spoiled negatives will answer, if they are cleaned, which can be done with a strong solution of lye. I placed one of the glasses on a flat board, and sprinkled a small quantity of emery on it, which I wetted with water. Placing the other glass on that, I H. CHALMERS Agt.

ground them together, renewing the emery and water whenever necessary. In about one hour I had two of the finest quality of ground glasses, fully as good as those I would have to pay seventy-five cents for, 8 by 10 size.

Pigeon Breeders in Session.

Among novel exhibitions to be held in Paris is that of the Colombophiles, or the pigeon breeders. As the Colombophiles are concerned only with pigeons considered as instruments and carriers in war time, they have decided to hold their meeting with the aeronauts, who are engaged in a similar pursuit. The meeting will be held at the end of July, and will be the occasion of interesting experi-ments, among which, says Popular Science News, are prominent the simultaneous ascen-sion of a number of balloons and the freeing of a hundred thousand pigeons—carriers, of course—which will fly to their respective sta-

Edison's Far Sight Machine.

The Electrical Review is authority for the statement that Mr. Edison hopes with one of his numerous inventions to be able to increase the range of vision by hundreds of miles, so that, for instance, "a man in New York could see the features of his friend in Boston with as much ease as he could see a performance on the stage;" that, Mr. Edison says, "would be an invention worthy a prominent place in the world's fair, and I hope to have it perfected here before 1809."

Automatic Candles. A new candle has been brought out which extinguishes itself in an hour. This it does by means of a tiny extinguisher of tin, which is fastened in the wax by wires, and which effectually performs its task. It is only neces-

sary to remove this diminutive extinguisher when its work is done, and the candle is again ready to burn another bour.

The New London (Conn.) double track railroad bridge, it is claimed, is the largest draw-bridge in the world. An international congress of agriculture and forestry will be held in Vienna during the summer of 1890.

Professor Wollney, of Munich, is authority for the statement that electricity, whether under the form of continuous currents of different intensities or of alternating currents, exerts no influence on the vegetation of

Some curious electrical experiments are being made at the summit of the Eiffel tower. The atmosphere round the tower at this elevation is free from all influence of the soil, as would be the case at the top of a mountain, and the air is in an extraordinarily sotive state of electricity

M. E. INGALLS. A Prominent Railroad Man Who Has Rap

idly Come to the Front. Probably no prominent railroad man in the United States has ever come to the front with greater rapidity than M. E. Ingalls, of Cincinnati. Born on a farm near Harrison, Me., in 1842, he was graduated from Bridgeton academy, and doin college. Leaving the latter, he entered Harvard Law school, and was graduated therefrom in 1863. He soon except when seven or eight other people opened a law office in Boston, and, be- put out by her little wiles.

NEW YORK'S PROPOSED CATHEDRAL

Selection May Be Made. York, four were set apart for elabora- Sunshine ranch, near Mt. Ord. designs are elaborated.

The plan which is the joint work of George Martin Huss and John H. Buck, of New York, stands high in favor. The architects have designed the cathedral in the usual form of such structures, a cross; and from the junction of the nave and transepts rises a magnificent spire. The material suggested for the outside is granite or Wyoming valley or Warsaw blue stone and Indiana buff limestone. It is proposed to face the walls with wrought stone and marble shafts and slabs. The roof above the vaulting is to be of iron, filled in with fire proof blocks and covered with lead or copper.

Of the remaining three designs, that of C. Grant Lafarge and William W. Kent, who produced a plan together, is Byzantine. Mr. William Halsey Woods' plan is an embodiment of all modes of Herald. gothic expression.

It is not certain that any of the four selected for elaboration will be adopted. Before a selection is made some new competitor may arise and produce a plan so striking as to obscure all the

Proof Positive. First Club Idler—What does this mean? The paper says that Rococo, the well known architect, is in an insane asylum. Second Club Idler-Oh, yes; he drew the plans for a house to cost \$25,000 and it cost only \$20,000. A commission was

insane.-New York Tribune. English authorities have concluded that dynamic cooling, if not the sole cause of rain, is at all events the only cause of any importance, all other causes being either inoperative or relatively insignificant.

In closing, we would state that the climate there is delightful at all sea sons of the year.

About Correct.

The following remarks which, correctly set forth the facts, are taken from the Gallup (N. M.) News-Regis- GENERAL MERCHANDISE,

Several New Mexico papers recently mentioned in glowing terms of return of a large number of Indian children from Carlisle, Pennsylvania, where

they have been spending the last six years acquiring an education. To the writer it was sad news. One day this week he learned of one of these Indian boys who have thus, by the very sublimation of cruelty, been educated and sent back to their tribe. Among these unfortunates is a Navajo boy, a nephew of Watchman John, watchman at the Navajo reservation. This poor boy returns to his tribe not able to speak one word of his mother tongue, and English but brokenly. He has no means for his own support, no knowledge of Indian craft, no trade practiced among the Indians with which to support himself, no means to go out among the whites and earn a living, no friends; and is left, deserted indeed, among the savages to starve. tion, and from these four it is probable that one may be selected. So important a matter must necessarily be slow of setbecome of him? He is the laughing stock of the Indians, the by-word of Caskets and Undertaking Materials. the low whites, pitied only by agency employes who have no means of aiding him. This is the work of the cruel fools who take Indian children from their tribe, partially educate until they forget their mother tongue and send them out to the wild tribes that have forgotten them, to starve or

to turn thieves. A Tucson Episode From a party who visits Tucson the
